Examination

Exposure:
ASCVD as Time
Dependent
Variable

Myocardial
Infarction

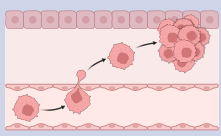

Stroke

Outcome:
metastatic or
non-metastatic
cancer at
diagnosis

Israel National
Cancer Registry

metastatic or
non-metastatic
cancer at
diagnosis

ASCVD Score
>7.5

ASCVD

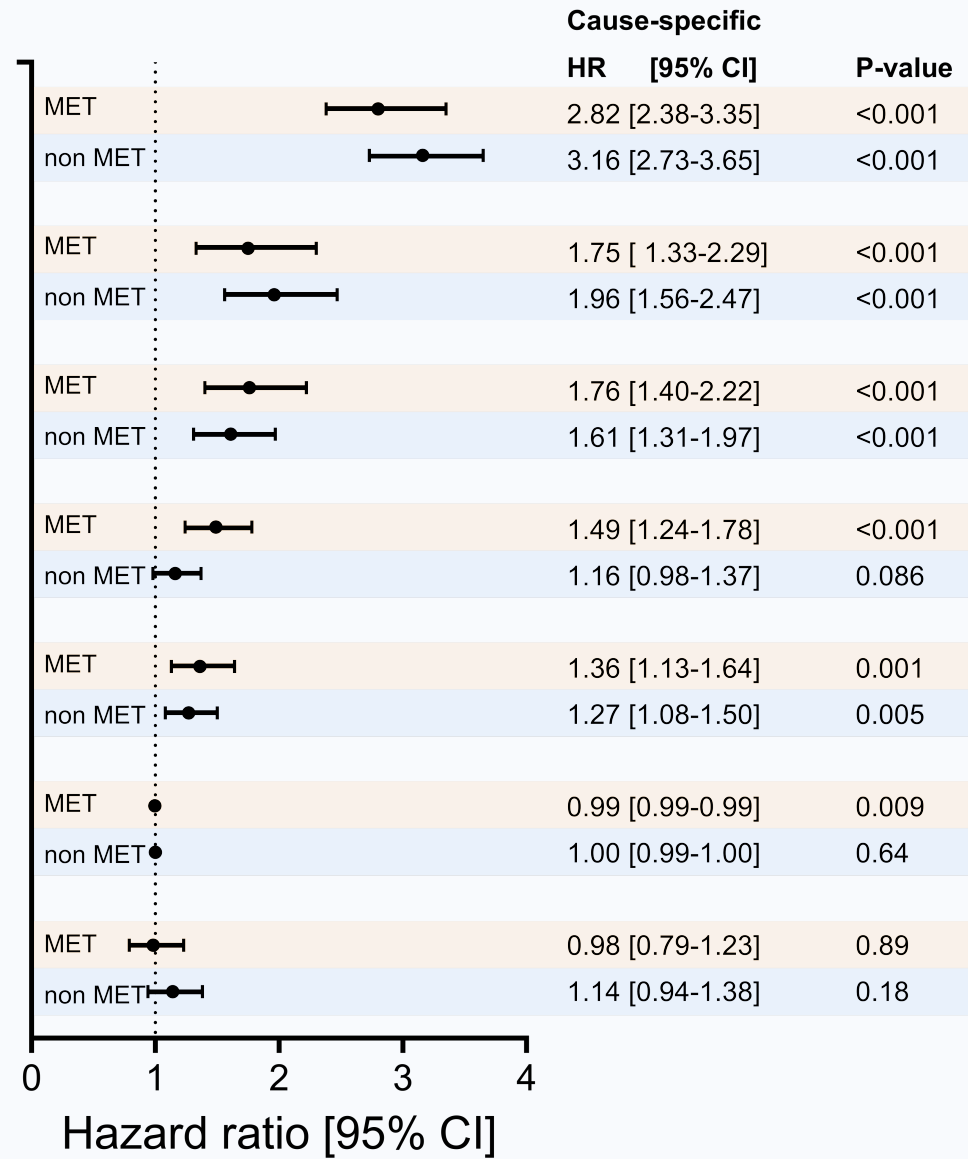

eGFR<60

Impaired
fasting glucose

Obesity

LDL (continous)

Anemia

Conclusions: ASCVD is associated with an increased and independent risk of metastasis at diagnosis of cancer. The risk is age-dependent and more significant among middle-aged adults.
