The Meeting Program

ISRA 2026

Israeli Radiological Association Annual Meeting

Dear Colleagues and Friends,

It is our pleasure to welcome you to ISRA 2026, the Israeli Radiology Annual Meeting, and invite you to join us for an inspiring and enjoyable meeting on the beautiful shores of the Sea of Galilee.

This year's meeting will focus on AI Beyond Detection – exploring how artificial intelligence is becoming part of our everyday practice, far beyond the detection of imaging findings. The program will also highlight new developments across the spectrum of radiology, featuring presentations by specialists and residents from institutions throughout Israel.

We are also introducing new formats, including The Great Debates, as well as a lively and entertaining competition between resident teams from different radiology departments.

Above all, ISRA is an opportunity to meet friends and colleagues, learn and teach, exchange knowledge and ideas, and enjoy time together.

Join us for three days of learning, innovation, professional exchange, and friendship, surrounded by the autumn beauty of the Sea of Galilee.

We look forward to welcoming you to ISRA 2026!

Warm regards,

Prof. Ilan Shelef
Chair, Israel Radiological Association

The NAEOTOM Alpha class: Three versatile systems powered by proven Quantum Technology, setting a new standard in medical imaging. Designed to deliver detailed insights and conclusive results, these systems help optimize patient pathways and elevate diagnostic confidence—enabled by AI-powered productivity that accelerates workflows and enhances clinical outcomes.

Photon-counting CT technology

Enhanced image quality: Support confident clinical decision making with high image resolution and contrast.

Energy discrimination: The ability to differentiate between energy levels of X-ray photons allows for enhanced tissue characterization and material decomposition.

Reduced noise: Achieve clear, accurate image quality while optimizing radiation dose.

No compromises: Provide both ultra-high-resolution and spectral information in a single scan, empowering confident diagnoses and optimized patient care at full scan speed.

AI-powered productivity

Streamlined processes: Reduce setup and scan times with automatic zero click post-processing, designed to integrate seamlessly into existing workflows.

User-friendly interface: An intuitive user interface powered by myExam Companion simplifies operation and reduces the learning curve for medical staff.

Automated features: One-touch patient positioning for accurate isocentering and automated image reconstruction allow for enhanced efficiency and consistency in imaging procedures.

Profound clinical impact
